

COPEC S.A.
ENERGY POLICY

COPEC

Copec S.A. Energy Policy

At Copec, we are defined by our commitment to Chile, which we state in our purpose: "We exist to empower the development and mobility of people, companies, and the country" through products, services, solutions, and experiences that meet the needs of life on the move. We do this with excellence, optimizing energy use, minimizing the environmental impact of our processes, and seeking a balance between economic benefit and the value we bring to society.

In this regard, we have developed an Energy Policy with the aim of managing the organization's energy consumption and resources, ensuring their efficient and responsible use.

These are our commitments:

☐ Sustainably use the natural resources available for the organization's activities, contribute to caring for the environment, and reduce greenhouse gas (GHG) emissions.

☐ Support the acquisition of energy-efficient products, equipment, and services, incorporating objective criteria and parameters into the design, decision-making, and quality processes.

☐ Develop energy efficiency training programs for employees and external parties whose work is directly involved in the organization's energy performance.

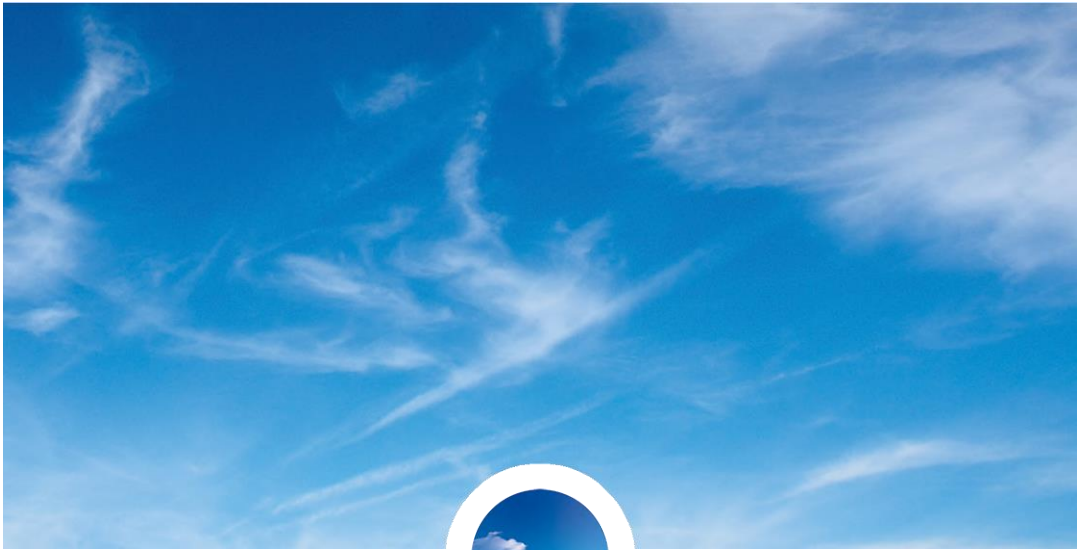

☐ Promote sustainable development in the Company's energy efficiency initiatives, establishing a commitment to continuous improvement, in which the Energy Management System, its indicators, and operations are regularly verified, ensuring compliance with the targets and goals to promote sustainable development in the Company's energy efficiency initiatives/products/services.

☐ Ensure the availability of information and resources needed for the proper functioning of the Management System and the organization's energy performance.

☐ Promote compliance with Chilean regulations, international standards, and other applicable requirements on energy efficiency, use, consumption, and environmental issues in the company.

In accordance with our ongoing commitment to quality and responsibility towards our employees, the environment, society, and to supporting our customers in the energy transition, at Copec we are committed to ensuring compliance with this Energy Policy at all times.

Arturo Natho G.
